Traffic report

Fed up with getting stuck in traffic? Help is at hand with TrafficTV, which informs motorists around the UK about traffic conditions on some 8,000 miles of road.

With live updates, real-time photographs and full CCTV streaming, this service is available to all owners of colour-screen mobiles. The service is available on all networks to both the new generation of 3G phones and conventional ones.

A piece of software is downloaded to the mobile phone allowing web connection for updates on the latest road conditions. The company behind the service, mxData, said up-to-date warnings and alerts are delivered direct to the user with prices starting from £1 per day.
